VITAL STATISTICS OF THE UNITED STATES, 1976 VOLUME III-MARRIAGE AND DIVORCE

A brief summary of the contents for each section is listed below for the convenience of the reader. A complete table of contents is shown at the beginning of each section and is identified by a narrow black edge which can be located easily by fanning the pages. Each section is paged independently, using the section number as the identifying prefix.

Section 1. Marriages

For the United States:

National trend data.

Marriage totals and rates for each State, division, and region.

Marriage totals for each county or county equivalent.

Monthly marriage totals for each State, division, and region.

For the marriage-registration area:

Marriages classified by major demographic characteristics of bride and groom and by characteristics of marriage performed in each participating State; marriage rates specific for sex, age, and previous marital status.

Section 2. Divorces

For the United States:

National trend data.

Divorce totals and rates for each State, division, and region.

Divorce totals for each county or county equivalent.

Trend of national totals of children involved in divorce.

For the divorce-registration area:

For each participating State, divorces classified by major demographic characteristics of husband and wife, characteristics of their marriage, and number of children.

Section 3. Puerto Rico and Virgin Islands (U.S.)

Marriage and divorce totals for each county or county equivalent.

Marriages classified by major demographic characteristics of bride and groom.

For Virgin Islands only, divorces and annulments classified by characteristics of husband and wife, duration of marriage, and number of children.

Section 4. Technical Appendix

Historical and contemporary sources of marriage and divorce statistics, design of the samples of marriages and divorces and annulments, variability of sample estimates, and uniformity and completeness of the reporting forms and the collected data. Tables of the population estimates used as bases for rates.

| 1-44. | Number of marriages by educational attainment of bride and groom: 16 reporting States, 1976 | 1-71 |
| 1-45. | Marriages: United States, each State and county, 1976 | 1-72 |

Sampling Variability of the Marriage Statistics

In the tables which present statistics based on data from probability samples of marriage records, small frequencies have high sampling variability, which limits their usefulness. The sampling errors are shown in table 4-6 in the Technical Appendix. It is suggested that any number smaller than those shown below be interpreted simply as "small" rather than as any more precise value. The true number would very probably be within 60 percent of the figure shown below. Figures for States shown as "zero" indicate that all records were tabulated and thus data are not subject to sampling variability.

| Marriage-registration | | Michigan | 225 |
|-------------------------|-----|---------------------------|-----|
| area | 120 | Minnesota | 100 |
| | | Mississippi | 100 |
| Alabama | 100 | Missouri | 0 |
| Alaska | 0 | Montana | 15 |
| California | 225 | Nebraska | 0 |
| Connecticut | 50 | New Hampshire | 0 |
| Delaware | 0 | New Jersey | 225 |
| District | | New York | |
| of Columbia | 15 | (including New York City) | 0 |
| Florida | 0 | North Carolina | 100 |
| Georgia | 225 | Ohio | 225 |
| Hawaii | 15 | Oregon | 50 |
| Idaho | 50 | Pennsylvania | 225 |
| Illinois | 225 | Rhode Island | 0 |
| Indiana | 225 | South Carolina | 0 |
| Iowa | 100 | South Dakota | 15 |
| Kansas | 50 | Tennessee | 225 |
| Kentucky | 100 | Utah | 50 |
| Louisiana | | Vermont | 0 |
| (including New Orleans) | 100 | Virginia | 0 |

Table 1-4. Estimated Number of Marriages and Marriage Rates, by Month, With and Without Seasonal Adjustments: United States, 1967-76

[Rates on an annual basis per 1,000 estimated population for specified month. The number and rates of marriages by month adjusted for seasonal variation are the figures that would have occurred during the month if the characteristic seasonal pattern of marriages observed during the years 1967-76 had been eliminated]

¹Data are estimated, ²Marriage licenses issued. ³Data by month are estimated, ⁴Data exclude 30,125 nonlicensed registered marriages.

Table 1-7. Marriage Rates by Previous Marital Status and Age of Bride and Groom: Marriage-Registration Area, 1976

[Based on sample data, Rates per 1,000 male and female population of specified age residing in area. Rates for all marriages are based on unmarried population, those for first marriages are based on single population, and those for all remarriages are based on widowed and divorced population. Figures for widowed and divorced, but not for all remarriages, exclude data for Michigan, Ohio, and South Carolina. Figures for all marriages include previous marital status not stated; all remarriages include widowed or divorced not stated)

| Previous marital status and age | Bride | Groom |

[&]quot;Districts" shown are election districts, the nearest equivalent to counties.

Bata exclude 30,125 nonlicensed registered marriages.

Divisions are parishes.

Data are estimated.

Marriage licenses issued.

Independent cities have the same status as counties and are listed after counties.

On January 1, 1974, Nansemond merged with the independent city of Suffolk; marriages for Nansemond have been included in those for Suffolk.

Section 2. Divorces

| Table | | Pa |
|------------|---|-----|
| 2-1. | Estimated number of divorces and annulments and rates, with percent changes from preceding year: United States, 1920-76 | 2 |
| 2-2. | Divorces and annulments and rates: United States, each region, division, and State, 1971-76 | 2 |
| 2-3. | Reported annulments and percent of total divorces and annulments: United States and each State, 1971-76 | 2 |
| 2-4. | Percent distribution of divorces and annulments by duration of marriage at time of decree: Divorce-registration area and each registration State, 1976 | 2 |
| 2-5. | Median ages of divorced husband and wife at time of decree and at time of marriage: Divorce-registration area and each registration State, 1976 | 2 |
| 2-6. | Median duration of marriage prior to divorce or annulment: Divorce-registration area and each registration State, 1976 | 2 |
| 2-7. | Estimated number of children involved in divorces and annulments, average number of children per decree, and rate per 1,000 children under 18 years of age: Divorce-registration area and each registration State, 1976 | 2- |
| 2-8. | Estimated number of children involved in divorces and annulments, average number of children per decree, and rate per 1,000 children under 18 years of age: United States, 1953-76 | 2- |
| 2-9. | Percent distribution of divorces and annulments by number of children reported: Divorce-registration area and each registration State, 1976 | 2. |
| 2-10. , | Divorces and annulments by place where marriage was performed: Divorce-registration area and each registration State, 1976 | 2 |
| 2-11. | Divorces and annulments by age of husband and wife at time of decree: Divorce-registration area and each registration State, 1976 ———————————————————————————————————— | 2 |
| 2-12. | Divorces and annulments by age of husband and wife at time of marriage: Divorce-registration area and each registration State, 1976 | 2 |
| 2-13. | Divorces and annulments by race of husband by race of wife: Divorce-registration area and each registration State, 1976 | 2 |
| 2-14. | Divorces and annulments by number of this marriage of husband and wife: Divorce-registration area and each registration State, 1976 | 2 |

| 2-25. | Divorces and annulments: United States, each State and county, 1976 | 2-27 |

Sampling Variability of the Divorce Statistics

In the tables which present statistics based on data from probability samples of divorce records, small frequencies have high sampling variability, which limits their usefulness. The sampling errors are shown in table 4-8 in the Technical Appendix. It is suggested that any number smaller than those shown below be interpreted simply as "small" rather than as any more precise value. The true number would very probably be within 60 percent of the figure shown below. Figures for States shown as "zero" indicate that all records were tabulated and thus data are not subject to sampling variability.

NOTES

Reporting areas

Marriage data are shown for both Puerto Rico and the Virgin Islands. Divorce totals are shown for both Puerto Rico and the Virgin Islands and detailed divorce statistics for the Virgin Islands only.

Geographic classification

Data are shown by place of occurrence. Totals are shown for the local areas St. Croix Island and St. Johns and St. Thomas Islands (the latter two combined) in the Virgin Islands and for the primary geographic subdivisions, "municipios," in Puerto Rico. Courts empowered to grant divorces are located only in a few municipios in Puerto Rico; residents of other municipios obtain divorces in these courts.

Race and color

For 1976, brides and grooms are not shown by color for either Puerto Rico or the Virgin Islands. Husbands and wives divorced in 1976 are classified as white or all other for the Virgin Islands.

Section 4—the Technical Appendix—includes information about the sample specifications, sampling errors, and completeness of reporting for these statistics from Puerto Rico and the Virgin Islands.

SECTION 4 - TECHNICAL APPENDIX

SOURCES OF DATA

Marriage and divorce statistics in this volume are based on information from three sources: (1) Complete counts of events obtained from all States, (2) samples of marriage and divorce certificates from States meeting specified reporting criteria, and (3) precoded machine-readable data for all marriages and all divorces occurring in States participating in the Federal-State-Local Gooperative Health Statistics System (CHSS).

State and local officials annually provide complete counts of marriages and divorces by county of occurrence and marriages by month of occurrence. From these counts, marriage and divorce totals are derived and rates are computed for each State, geographic division, region, and the United States. For marriages a total is also derived for the marriage-registration area.

Sample records are obtained by the National Center for Health Statistics (NCHS) from microfilm copies of the original certificates received from the registration offices of States and areas comprising the marriage-registration area (MRA) and the divorceregistration area (DRA). The statistical information on these records, including data on the characteristics of marriages and divorces and of the persons involved in them, is edited, classified, transferred to tape for computer processing, and tabulated in NCHS. Exceptions to this procedure are statistics from those States in the MRA or DRA that submit precoded machinereadable data to NCHS through CHSS. Statistical data for 1976 for both marriages and divorces were provided through CHSS by the following seven States: Missouri, Nebraska, New York (except for New York City marriages), Rhode Island, South Carolina, Vermont, and Virginia. For marriages, Florida has submitted precoded data since 1972 and Maine and New Hampshire since 1975.

The marriage totals for the MRA and each participating State derived from sample data differ slightly from the totals obtained from the complete count described above. The two published divorce totals for each State in the DRA also vary slightly. Only one total is published for the DRA, and it is based on sample data.

Marriage and divorce statistics for the United States, for the registration areas, and for individual States are limited to events occurring during the year and registered within the specified area. All tabulations are by place of occurrence and include events occurring to nonresidents. Marriages or divorces of members of the Armed Forces or other U.S. nationals that occur outside the United States are excluded. United States refers to the 50 States and the District of Columbia. Alaska has been included in the U.S. tabulations since 1959 and Hawaii, since 1960. Data for Puerto Rico and the Virgin Islands were compiled for 1976 and preceding years except 1966-69 and 1972. Data for these areas were processed separately from the rest of the MRA and DRA and appear in Section 3 of this volume.

Sources of marriage and divorce data since 1867 are shown in table 4-1; a description of these sources can be found in Section 7, Volume III, Vital Statistics of the United States, 1960.

Nationwide counts

In 1976 the total counts of marriages by State and county were obtained from central files of marriage records for the 47 States maintaining them and from the District of Columbia. The registration officials of Manhattan supplied the counts for the five boroughs of New York City. In the three States without central files, counts were obtained from the counties by State officials or by NCHS. State officials reported the counts for Arizona and Oklahoma. County totals were obtained from county officials in New Mexico.

Total counts of marriages performed were requested from each county registration official. However, as in prior years, a small number of counties reported the number of marriage licenses issued rather than the number of marriages performed. The number of marriage licenses issued is usually 1 or 2

percent greater than the number of marriages performed. (See page 2-1, Section 2, Volume I, Vital Statistics of the United States, 1959.)

The annual counts of marriages for California exclude all nonlicensed marriages performed in that State. There were 1,075 nonlicensed marriages registered in 1972; 2,857 in 1973; 10,555 in 1974; 19,061 in 1975; and 30,125 in 1976.

Total counts of divorces by State and county include decrees of absolute divorce and of annulment as well as decrees of marriage dissolution newly introduced in many States. These counts were obtained from central files of the 46 States maintaining them and from the District of Columbia. Either local or State officials provided the county totals for the four States without central files of divorce records. Local officials in Indiana and New Mexico supplied the

county totals. State officials in Arizona and Oklahoma obtained the county totals and forwarded them to NCHS.

Divorces and annulments were not reported for one county or more in the following States: Alabama (1), Arkansas (7), Indiana (14), Louisiana (9), and Pennsylvania (1). The number of divorces for some counties in Indiana is based on the number of petitions filed, rather than on the divorce decrees granted.

Marriages and marriage rates with seasonal adjustments

For all years appearing in table 1-4 the number of marriages and the marriage rates have been adjusted for large seasonal fluctuations and for the effect of the number of Fridays and Saturdays in each month. Prior to 1970, adjustments were also made for Lent,

but they were discontinued because of the lessening influence of Lent on marriages. Most religious denominations have relaxed or abolished their rules against marriage during that period.

Registration areas

Registration areas for the collection of marriage and divorce statistics were established in 1957 and 1958, respectively. These areas include States with adequate programs for collecting marriage and divorce statistics. Criteria for participation in the registration areas are

- 1. A central file of marriage or divorce records
- 2. A statistical report form conforming closely in content to the Standard Certificate of Marriage

- (figure 4-1) or Standard Certificate of Absolute Divorce or Annulment (figure 4-2)
- 3. Regular reporting to the State office by all local areas in which marriages or divorces are recorded
- 4. Tests for completeness and accuracy of marriage or divorce registration carried out in cooperation with NCHS.

In 1976 the MRA (figure 4-3) comprised 41 States, the District of Columbia, Puerto Rico, and the Virgin Islands. The DRA (figure 4-4) included 29 States and the Virgin Islands. Table 4-2 shows when States and independent registration areas established central files and when they were admitted to the MRA and DRA.

In the statistical tabulations in this volume, Marriage-registration area refers only to the 41 States and the District of Columbia. Divorce-registration area refers to the 29 States. Marriages in the MRA accounted for 79 percent of all marriages in the United States in 1976, and divorces in the DRA accounted for 61 percent of all divorces.

Standard certificates

The Standard Certificate of Marriage (figure 4-1) and the Standard Certificate of Absolute Divorce or Annulment (figure 4-2), issued by the Public Health Service, serve as the principal means of getting comparable data from documents used to collect information on marriages and divorces in the United States. These model reporting forms, prepared in close collaboration with the Public Health Conference on Records and Statistics, were first recommended to the States in 1954 for adoption January 1, 1955, and stood without revision through 1967.

Revised standard certificates were recommended to the States for use beginning January 1, 1968. New items added to the marriage certificate were education of bride and groom, date last marriage ended if previously married, and identification of the officiant as religious or civil. New items added to the divorce certificate were approximate date couple separated,

education of husband and wife, name of attorney for plaintiff, number of previous marriages ended by death or by divorce or annulment, and total number of living children. The items "usual occupation" and "kind of business or industry" were dropped from the marriage and divorce standard records.

Each State and independent registration area determines the form and content of its vital records. Consequently the records vary in certain details. Although modified in each State as required by particular needs or by special provisions of the State vital statistics law, the marriage and divorce certificates of most States in the MRA and DRA conform closely to the standard certificates.

Table 4-3 lists items on the Standard Certificate of Marriage and shows which States had the items on their forms in 1976. Table 4-4 shows the same information for the Standard Certificate of Absolute Divorce or Annulment.

Characteristics of marriages and divorces

Each year statistical information on characteristics of marriages and divorces is provided by the States participating in the registration areas.

FIGURE 4-3

FIGURE 4-4

The items processed for marriages in the MRA for 1976 and shown in this volume were State of marriage; month and day of week of marriage; type of ceremony, civil or religious; and the following items relating to characteristics of bride and groom: State of birth, date of birth or age, nativity status, residence status, race, number of this marriage, previous marital status, and education.

For divorces (including absolute divorces, annulments, and decrees of marriage dissolution) the items processed for 1976 and shown in this volume were State in which divorce was granted, number of children under 18 years of age, month and year of marriage (from which duration of marriage and age at marriage are obtained), month and year of separation (from which duration of marriage to separation and duration of separation to divorce are obtained), place of marriage, and the following items relating to husband and wife: Date of birth or age, race, number of this marriage, and education.

Most of the items tabulated for marriages and divorces in 1976 were on the corresponding certificates of nearly all the reporting areas in the MRA or in the DRA. For marriages, items on age at marriage

or date of birth and State of residence were included by every MRA State and the District of Columbia and were well reported. For divorces, date of marriage, place of marriage, and number of children were included by every State in the DRA and were well reported.

Information about previous marriages of the bride and groom is obtained from two items: Number of this marriage and previous marital status: For the District of Columbia and the 35 States that requested both items on their marriage certificates, first marriages and remarriages could be identified if either item was stated. Idaho, Maryland, and Oregon requested only the item on previous marital status. For these States the number of not stated cases for the missing item (number of this marriage) was reduced by the number of cases assumed to be first marriages because previous marital status was stated as single. Michigan, Ohio, and South Carolina requested only "number of times previously married." Not stated cases for the missing item (previous marital status) were reduced by the number of persons assumed to be single because they had been previously married "0" times. Both items, previous marital status and

number of this marriage, were removed from the Iowa marriage certificate July 1, 1976.

All of the States in the DRA except Nebraska request reporting of the number of this marriage on their divorce certificates. Not stated cases for the missing item (number of this marriage) have not been adjusted where it is stated that no prior marriage ended in death or divorce, because the latter item has been included on the certificates of only 15 States in the DRA and has been poorly reported in most of those States.

Race is generally not well reported on either marriage or divorce certificates. The item appears on the marriage forms of all States in the MRA except California, Maryland, Massachusetts, Michigan, New York, and Ohio. The District of Columbia no longer reports race on its marriage certificates. Race was not reported for 26,270 (2.3 percent) of the marriage certificates issued by the 35 other States which had the item on their certificates in 1976. The item for race was removed from the Iowa marriage certificate July 1, 1976. Overall, race or color of bride and groom was not available for 582,703, or 34 percent, of the 1,706,628 marriages from the entire MRA. Race appears as an item on the divorce certificates of all States in the DRA except Michigan and Ohio. Race was not reported for 34,547 (6.2 percent) of the husbands on divorce certificates issued by the other 27 States in the DRA. Overall, race or color of husband was not available for 136,947, or 21 percent, of the husbands in the 656,535 divorces from the entire DRA. Figures for wives in divorces are very similar.

Tables 4-3, 4-4, 4-9, and 4-10 show which items appear on the records of the registration States and how well they are reported by each State.

SAMPLE DESIGN

Obtaining the records

Each year the States and areas participating in the MRA and the DRA prepare microfilm copies of their records, which are purchased by NCHS. Further processing, including the selection of samples of certificates from microfilm copies and the code-punching, verification, and tabulation of statistical data from the sample records, is carried out by NCHS. As noted above, exceptions to this procedure occur for those States in the MRA or DRA which submit precoded machine-readable data tapes to NCHS through CHSS. These precoded computer tapes contain statistical data on all marriages or divorces occurring in those MRA or DRA States providing data through CHSS.

For marriages the records refer to all marriages

performed in 1976 within the 41 MRA States, the District of Columbia, Puerto Rico, and the Virgin Islands. Nonlicensed marriages performed in California are not included in the sample (see discussion in the Section on Nationwide counts). For divorces the records refer to all decrees of absolute divorce, dissolution of marriage, and annulment that were granted during 1976 within the 29 DRA States and the Virgin Islands.

Interlocutory divorce decrees or decrees "nisi" (which grant that the divorce takes permanent effect at a specific time in the future if the couple does not reconcile in the meantime) are included among the records of the States that grant them, usually for the year in which they were granted.

The sampling of marriage and divorce records for States in the registration area was initiated in 1960. For earlier years, data on characteristics had been compiled from predesigned tables completed on the basis of all events and submitted by the States.

Sampling procedures

The marriage sample was designed to yield estimates of State totals as well as frequency distributions by characteristics of the bride and groom. These estimates were made for the total MRA and each State in the MRA. A sampling rate was designated for each of the MRA States so that the selected sample for it would consist of at least 2,500 records. Five different sampling rates were used: All records, 1/2, 1/5, 1/10, and 1/20. All records were automatically included in the total MRA sample for States submitting precoded marriage data through CHSS. Overall, about 32 percent of all marriages in the MRA were included in the sample for 1976.

Sampling procedures for the divorce sample parallel those for the marriage sample. A sampling rate was selected so that the sample for each DRA State would contain at least 1,000 records. Four different sampling rates were used: All records, 1/2, 1/5, and 1/10. All records were included in the total DRA sample for the CHSS States. Overall, about 30 percent of all divorces in the DRA were included in the sample for 1976.

The sampling rates, number of events, and sample cases by State for 1976 are shown in tables 4-5 (marriages) and 4-7 (divorces).

ESTIMATING PROCEDURES

Area totals

The figures obtained from complete counts of events furnished by the State and local offices differ

slightly from the estimated totals based on sample data. When possible, major differences between the totals estimated from the sample and those based on independent counts for each reporting State are reconciled before the sample data are weighted and tabulated. However, even in States where 100 percent of the records are sampled, the sample estimate may differ from the State count because of differences between NCHS and State cutoff dates in accepting records.

The sample estimate of marriages in the MRA differed from the complete count by 0.1 percent. It differed by less than 1 percent in all States except Kentucky (a difference of 1.6 percent), and in the District of Columbia (2.7 percent).

The sample estimate of divorces in the DRA differed from the complete count by 0.1 percent. It differed by less than one percent in all States except Maryland (1.4 percent), Utah (3.5 percent) and Wisconsin (2.7 percent). The discrepancy for Utah resulted from records missing from the microfilm from which the sample was drawn. For Wisconsin the total count provided by the State was based on records received during the year, including some records from 1975.

Frequencies

Procedures for estimating frequency distributions for various characteristics from the marriage and divorce samples involve two steps.

- 1. Each sample case was assigned a weight which was the reciprocal of the sampling ratio used to select the case. If a marriage record was selected from a State with a sampling ratio of 1/10, that record was assigned a weight of 10; if 100 percent of the records were processed from a State, each such record was assigned a weight of 1.
- 2. Tabulated counts consisted of summing the records multiplied by their assigned weights. Thus each frequency distribution, such as age at marriage of first-married brides, is a sum of the weighted sample cases included.

The weights for all sample records are identical within each State. However, as shown in tables 4-5 and 4-7, the weights vary among the registration States from 1 to 20 for marriage records and from 1 to 10 for divorce records. Therefore, for the MRA and DRA, any two approximately equal frequencies may have different sampling errors, varying with the proportion of cases for each stratum included in the estimate.

Rates

Rates for 1940, 1950, 1960, and 1970 are based on the population enumerated as of April I in the censuses of those years. Rates for all other years are based on the estimated midyear (July 1) population for the respective years. Rates are based on population estimates including Armed Forces stationed in the United States but excluding Armed Forces abroad, except divorce rates for 1941-46 which are based on populations including Armed Forces abroad.

Allocation

On the computer tapes containing sample marriage records, values were allocated for missing ages of bride and groom. Reporting of these items has been almost 100 percent complete since 1960; in 1976 both items were more than 99.6 percent complete. Race was also allocated on those sample marriage records where the race of one of the spouses was stated. Because States in the DRA vary radically in the completeness with which items are reported on the divorce records, no allocations were made prior to tabulation of the divorce data.

Children involved in divorces

To obtain national estimates for 1970 through 1976, the average number of children under 18 years of age per decree for the DRA was multiplied by the national divorce total. From 1965 to 1969 the average number of children per decree was computed for the 16 States that had reported children with a satisfactory degree of completeness in 1965 (Alaska, Hawaii, Idaho, Iowa, Kansas, Michigan, Missouri, Montana, Nebraska, Ohio, Oregon, South Dakota, Tennessee, Virginia, Wisconsin, and Wyoming) and the national divorce total was multiplied by this average. This method was also used to revise figures for the years 1961-64 originally estimated by using a different method. Consequently data for 1961-64 shown in table 2-9 differ from figures appearing in Volume III, Vital Statistics of the United States prior to the 1965 issue. In 1960 the estimate was based on sample data for the United States. For earlier years total counts from States reporting the number of children were used to estimate the children involved in divorce for the United States.

SAMPLING ERRORS

Statistics for States where all records were used have no sampling error. For other States each statistic has a sampling error (or standard error) denoted by $\hat{\sigma}(x)$. The sampling error is primarily a measure of

variation that occurs by chance because a sample of records is surveyed rather than the entire population. The sampling error can be computed because within each State or registration area the probability that a record will be chosen for the sample is known (either all records, 1/2, 1/5, 1/10, or 1/20, as shown in tables 4-5 and 4-7). For about 68 percent of all possible samples of equal size the estimate from the sample would differ from the value obtained from a complete count by less than the standard error. For about 95 percent of all samples the difference would be less than twice the standard error.

Sampling errors are shown in table 4-6 for marriages and table 4-8 for divorces. To facilitate comparisons among registration States with widely varying totals of marriages and divorces, the sampling errors for the registration areas and participating States are shown for frequencies expressed as percents of State or of registration area totals. For example, table 1-18 shows 49,753 remarriages to grooms 20-24 years of age in the MRA for 1976. This estimated frequency is about 3 percent of all grooms in the MRA (1,706,628). In table 4-6 under the column "3 or 97" in the row for the total MRA we find the sampling error 728. Thus, chances are about 68 out of 100 that the actual number of remarriages to grooms 20-24 years of age is within one standard error of the estimate from this particular sample (49,753 ± 728, or between 49,025 and 50,481). The interval from 49,025 and 50,481 is called a 68-percent confidence interval for the actual number of remarriages of grooms 20-24 years of age. The sampling error of a given frequency of marriages or divorces in a particular State can be calculated from the formula.

$$\hat{\sigma}(x_{ij}) = \sqrt{\frac{N_i(N_i - n_i)p_{ij}q_{ij}}{n_i - 1}}$$

where

i = a State or registation area

j = a subclass, such as an age group of brides

N_i= the final count of events reported by State i (tables 1-6 and 2-2)

 n_i = the number of sample records in State i (tables 4-5 and 4-7)

p_{ij} = estimated proportion of all cases with the characteristic j to be studied for State i (shown in the spread margin of tables 4-6 and 4-8 as percent under "1 or 99," "2 or 98," "3 or 97," etc.)

 $q_{ij} = 1 - p_{ii}$

 $x_{ij} = N_i p_{ij}$, the estimated frequency of the characteristics under study.

In this formula we see that when the number of sample records, n_i , is the same as the total marriages, N_i , the numerator becomes zero, and there is no sampling error for States that have all their records processed. We also see that because the values of p_{ij} and q_{ij} are complementary, their product $(p_{ij}q_{ij})$ remains the same if their values are reversed. For instance, the estimated sampling error for an estimate of 5 percent is the same as the sampling error for 95 percent. Therefore the sampling error for both values is listed in one column in table 4-6 and 4-8 under the heading "5 or 95."

For example, to calculate the sampling error for previously widowed Alabama brides

N_i= 46,450, the final count of Alabama marriages (table 1-6)

 $n_i = 4,645$, the number of sample records for Alabama (table 4-5)

 x_{ij} = 2,410, the estimated frequency of previously widowed Alabama brides (table 1-26)

 p_{ij} = the number of previously widowed Alabama brides expressed as a percent of all marriages: 2,410/46,450 = .05 or 5 percent

 $q_{ii} = 1 - p_{ij} = .95 \text{ or } 95 \text{ percent}$

and,

$$\hat{\sigma}(2,410) = \sqrt{\frac{46,450 (41,805) (.05) (.95)}{4,644}} = 141.$$

So chances are 68 out of 100 that the actual number of previously widowed Alabama brides is between 2,269 and 2,551 (2,410 ± 141).

The estimated sampling error for the MRA can be computed from the formula

$$\tilde{\sigma}(x_j) = \sqrt{\sum_{k=1}^{42} \frac{N_k (N_k - n_k)}{n_k - 1}} p_{kj} q_{kj}$$

where

42 refers to the 41 States and the District of Columbia in the MRA

 N_k = the final count of events reported by the k-th MRA State

 n_k = the number of sample records in the same State

 p_{kj} = the estimated percent of all cases in State k with the characteristic j

 $q_{kj} = 1 - p_{kj} .$

Using the same formula, sampling errors for the DRA shown in table 4-8 were computed by summing over the 29 States in the DRA.

Many of the tables in this volume show percent distributions rather than frequencies. The sampling error for such a percent can be computed by dividing the sampling error found in tables 4-6 or 4-8 by the estimated total number of events for the area. For example, table 1-10 shows that 4.7 percent of all Wyoming brides were previously widowed. In table 4-6 under the spread margin "5 or 95" the Wyoming sampling error is 17. Divide 17 by 5,874, the estimated number of marriages in Wyoming as shown in the stub margin of the same table. The result is 0.3 percent, the sampling error for an estimated 5 percent of 1976 Wyoming marriages. Thus, chances are about 68 out of 100 that the actual percent of previously widowed Wyoming brides is 4.7 ± 0.3, or between 4.4 and 5.0 percent.

The following formula is used to compute a sampling error for the proportion of events in a subclass of a subgroup, where the number of events in the subgroup is also subject to sampling error:

$$\hat{\sigma}(x/y) = (1/y) \sqrt{\hat{\sigma}^2(x) - (x/y)^2 \hat{\sigma}^2(y)}$$

where

y = the estimated frequency of the subgroup

x = the estimated frequency of the subclass of the subgroup

 $\hat{\sigma}(y)$ = the sampling error of y from table 4-6 or 4-8

 $\tilde{\sigma}(x)$ = the sampling error of x from table 4-6 or 4-8

To illustrate, if we wanted the sampling error for the proportion of all previously married Louisiana brides who were 20-24 years of age, let

 $\alpha = 1,950$ previously married Louisiana brides who were 20-24 years of age (table 1-19)

y = 10,140 previously married Louisiana brides

x/y = 0.1923

 $\hat{\sigma}_{(x)} = \hat{\sigma} (1,950) = 127$ from table 4-6 under "5 or 95" since x is approximately .05 of all Louisiana brides (x/N = 1,950/38,020 = .05)

 $\hat{\sigma}_{(y)} = \hat{\sigma}(10,140) = 253$ from table 4-6 under "25 or 75" since y is approximately .25 of all Louisiana brides (y/N = 10,140/38,020 = .27)

 $\hat{\sigma}_{\{x/y\}} = (1/10,140) \sqrt{(127)^2 - (.1923)^2 (253)^2} = .0116 \text{ or } 1.16 \text{ percent}$

So chances are 68 out of 100 that the actual proportion of previously married Louisiana brides who were

20-24 years of age was .1923 \pm .0116, or between 18.07 percent and 20.39 percent.

The significance of the difference between two proportions may be determined by the following formula:

$$\frac{(x_1/y_1) - (x_2/y_2)}{\sqrt{\hat{\sigma}^2(x_1/y_1) + \hat{\sigma}^2(x_2/y_2)}}$$

where the x's and y's represent the same subgroups as above, but of two populations, and where the denominator, under the square root sign, represents the sampling error of the difference between the proportions x_1/y_1 and x_2/y_2 shown in the numerator of the formula. If the above ratio is 2 or larger, the difference between proportions is considered significant at the .05 level.

For example, 19.23 percent of previously married brides in Louisiana were 20-24 years of age, with a sampling error of 1.16 percent. Using the same procedure for previously married brides in Minnesota, .1313 or 13.13 percent were 20-24 years of age, with a sampling error of .0175 or 1.75 percent. By the above formula:

$$\sqrt{\frac{..1923 - .1313}{\left(.0116\right)^2 + \left(.0175\right)^2}} = \frac{.0610}{.0173} = 3.5260$$

Since the difference in proportion divided by the sampling error is larger than 2, this difference of 6.1 percentage points between remarried brides in Louisiana and those in Minnesota is expected to occur by chance no more than once in 20 times; the difference is statistically significant at the .05 level.

NONSAMPLING ERRORS

In addition to the sampling errors described above, there are several other sources of variation that are little affected by the size or design of the sample.

Incomplete reporting

Nonresponse errors in marriage and divorce data may arise from any of these three sources: (1) The item is not on the certificate of a particular reporting area. For example, the item "color" was removed from the 1971 revision of the Massachusetts marriage record; (2) sometimes when a State revises its form to include additional items, copies of the old form are still used extensively by registration offices until a supply of the old version is exhausted; or (3) although the item may be on the form, there may be no

response, or the response may be illegible or unusable. Items on some forms are badly worded and do not elicit responses sufficiently precise to be classified.

Items not answered for any of these three reasons are tabulated as "not stated." Tables 4-9 and 4-10 show the proportions of not stated cases for specified characteristics of marriages and divorces for 1976. Footnotes to entries identify the specific State where an item was not on the certificate form (not reportable). A major proportion of the not stated cases for marriages were due to the absence of items on some of the reporting forms (not reportable). In contrast, the majority of not stated items on records of divorce or annulment arose from unanswered items (not completed). On the divorce records, personal information (age, race, etc.) typically has been less completely reported than information about the dissolved marriage or about the type of decree.

Other sources of error

Inconsistent responses.—Occasionally, for both marriages and divorces, the responses to related items are inconsistent. For example, the previous marital status of the bride or groom, as shown on the marriage certificate, may not be consistent with the stated number of times married or number of this marriage. Such differences are reconciled before tabulation.

Ambiguous wording of items.—Some of the items are worded so that they do not yield information easily classified in standardized categories. This often leads to errors in classification, more frequently of

geographic place names (residence, place of marriage, and place of birth) and of previous marriages.

Microfilm errors.—Errors in the arrangement of the records received on microfilm in NCHS sometimes occur when numbers on the records are out of sequence, missing, or duplicated, or when records that are not part of the universe being sampled are erroneously included in the file.

Processing errors.—Errors may arise in coding, punching, or tabulating of records. However, all sample coding was verified 100 percent; data already on computer tape were edited for impossible codes and for inconsistencies. Instances of impossible codes and inconsistencies in information about previous marriages were rechecked to the records.

In general, for most of the data available from 1960 onward, the completeness and year-to-year consistency are evidence of the basic reliability and coverage of the marriage- and divorce-registration systems.

SECTION 4 - TECHNICAL APPENDIX

Table 4-1. Sources of Marriage and Divorce Data: United States, 1867-1976

| Time period | Marriage | Divorce ¹ |
|--------------|--|--|
| 1867-86 | Estimates prepared by National Office of Vital Statistics based on results of field survey covering 20-year period conducted in 1887-88 by the U.S. Department of Labor. | Numbers and detailed statistics (legal grounds, duration of marriage, number of children reported, etc.) obtained in field survey covering 20-year period conducted in 1887-88 by the U.S. Department of Labor. |
| 1887-1906 | Estimates based on data from field survey covering 20-year period conducted in 1906-07 by the U.S. Bureau of the Census. | Numbers and detailed statistics (legal grounds, duration of marriage, number of children reported, etc.) obtained in field survey covering 20-year period conducted in 1906-07 by the U.S. Bureau of the Census. |
| 1907-15 | Estimates prepared by Bureau of the Census based on records from selected States. | Same as for marriage. |
| 1916 | Numbers collected through mail survey conducted in 1917-18 by Bureau of the Census. | Numbers and detailed statistics collected through mail sur- vey conducted in 1917-18 by Bureau of the Census. |
| 1917-21 | Estimates prepared by Bureau of the Census based on rec- ords from selected States. | Same as for marriage. |
| 1922-32 | Annual collection by Bureau of the Census through mail query to States with central files and to counties in the remaining States. | Numbers and detailed statistics collected annually by Bu- reau of the Census through mail query to States with cen- tral files and to counties in the remaining States. |
| 933-36 | Estimates by S. A. Stouffer and L. M. Spencer on basis of data available from selected States (American Journal of Sociology, January 1939). | Same as for marriage. |
| 937-40 | Estimates based on transcript returns and mail surveys of State and county offices conducted by Bureau of the Census. Some detailed statistics for 1940 based on transcript program. | Same as for marriage. |
| 941-43 | Estimates based on data from published State reports and from files of Bureau of the Census and Federal Home Loan Bank Board. | Same as for marriage, |
| 944-47 | Estimates based on figures for marriages and marriage licenses obtained by National Office of Vital Statistics from State and local registration offices. | Estimates based on figures for divorces and annulments ob- tained by National Office of Vital Statistics from State and local registration offices. |
| 948-56 | Estimates based on figures for marriages and marriage licenses obtained by National Office of Vital Statistics from State and local registration offices; detailed statistics based on pretabulated data provided by State offices of vital statistics. | Estimates based on figures for divorces and annulments ob- tained by National Office of Vital Statistics from State and local registration offices; detailed statistics based on pretabulated data provided by State offices of vital statistics. |
| 957 | Estimates based on figures for marriages and marriage licenses obtained by National Office of Vital Statistics from State and local registration offices; detailed statistics based on pretabulated data provided by States participating in the marriage-registration area (MRA). | Same as for 1948-56. |
| 958-59 | Same as for 1957. | Estimates based on figures for divorces and annulments obtained by National Office of Vital Statistics from State and local registration offices; detailed statistics based on pretabulated data provided by States participating in the divorce-registration area (DRA). |
| 960 | Statistics prepared in the National Center for Health Statistics from nationwide probability samples of marriage records designed to provide estimates for the United States, the four regions, the marriage-registration area, and each registration State. Totals of either marriages or marriage licenses by county and by month also tabulated in each State. These and totals estimated from samples were checked for consistency. | Statistics prepared in the National Center for Health Statistics from nationwide probability samples of divorce records. Records in the sample provided statistics on absolute decrees of divorce and annulment for the United States, the four regions, the divorce-registration area, and each registration State. Totals for each State by county also tabulated in each State. These and totals estimated from samples were checked for consistency. |
| 961-69 | Statistics prepared in the National Center for Health Statistics for the MRA and each MRA State from probability samples of the marriage records collected by each MRA State. Pretabulated totals of marriages or marriage licenses by county and by month, reported for all States, used to compute totals for the United States, four regions, and nine geographic divisions; also, for MRA States, checked for consistency with totals estimated from sample records. | Statistics prepared in the National Center for Health Statistics for the DRA and each DRA State from probability samples of the records of absolute divorces and annulments collected by each DRA State. Pretabulated totals by county, reported for all States, used to compute totals for the United States, four regions, and nime geographic divisions; also, for DRA States, checked for consistency with totals estimated from sample records. |
| 1970 | Statistics prepared in the National Center for Health Statistics for the United States (excluding Arizona, New Mexico, and Oklahoma), the MRA, each MRA State, and eight nonregistration States from probability samples of the marringe records collected by each MRA State and each of the eight nonregistration States. Pretabulated totals of marriages or marriage licenses by county and by month, reported for all States, used to compute totals for the United States, four regions, and nine geographic divisions. For MRA States and the eight nonregistration States, these totals were checked for consistency with totals estimated from sample records. | Same as for 1961-69. |
| 971 | - Same as for 1961-69. | Same as for 1961-69. |
| 972-74 | - Same as for 1961-69 except for Florida. In 1972, 1973, and 1974 Florida sent a computer tape of items pre-coded for all marriages in that State. | Same as for 1961-69. |
| 975 | - Same as for 1961-69 except for Florida Maine, Missouri, Nebraska, New Hampshire, New York (excluding New York City), Rhode Island, South Carolina, and Vermont. These States sent tapes of items precoded for all marriages. | Same as for 1961-69 except for Missouri, Nebraska, New York, Rhode Island, South Carolina, and Vermont. These States sent tapes of items precoded for all divorces. |
| 976 | Same as for 1975 except Virginia was added to the group of States submitting precoded tapes. | Same as for 1975 except Virginia was added to the group of States submitting precoded tapes. |
| | | |

Includes reported annulments.

Number of previous marriages.

Them does not specifically request State, but State or city was reported on most records; major cities were allocated to appropriate States. For this State, cities and towns are minor civil divisions directly below the county level. (Towns are equivalents of townships.)

Them was discontinued July 1, 1976.

Them was added July 1976.
