# TRIPHENYL PHOSPHATE

 $(C_6H_5)_3PO_4$ MW: 326.28 CAS: 115-86-6 RTECS: TC8400000

METHOD: 5038, Issue 1 **EVALUATION: PARTIAL** Issue 1: 15 August 1994

OSHA: 3 mg/m<sup>3</sup> PROPERTIES: solid; MP 50 °C; BP 245 °C

NIOSH: 3 mg/m<sup>3</sup> @ 11 mm Hg; d 1.27 g/mL @ 60 °C; ACGIH: 3 mg/m<sup>3</sup>

VP <0.05 kPa (<0.1 mm Hg);

flash point 220 °C

30 to 900 µg per sample

ESTIMATED LOD: 10 µg per sample [1]

**PRECISION (S,):** 0.051 [1]

SYNONYMS: phosphoric acid triphenyl ester; TPP

	SAMPLING		MEASUREMENT
SAMPLER:	FILTER (0.8-µm cellulose ester membrane)	TECHNIQUE:	GAS CHROMATOGRAPHY, FPD IN PHOSPHORUS MODE
FLOW RATE: 1 to 3 L/min			
VOL-MIN:	10 L @ 3 mg/m <sup>3</sup>	ANALYTE:	triphenyl phosphate
-MAX:	400 L	EXTRACTION:	10 mL anhydrous ether, 30 min
SHIPMENT:	routine	INJECTION VOLUME:	5 μL
SAMPLE STABILITY:	not determined	TEMPERATURE-	INJECTION: 250 °C DETECTOR: 250 °C
BLANKS:	2 to 10 field blanks per set		-COLUMN: 210 °C
BULK SAMPLE:	One bulk sample should be submitted to laboratory in a glass container with a Teflon-	CARRIER GAS:	N <sub>2</sub> , 50 mL/min
	lined cap. The label should match air samples.	COLUMN:	6-ft X 1/8-in stainless steel, packed with 5% OV-101 on 100/120 mesh Supelcoport
ACCURACY		DETECTOR:	H <sub>2</sub> , 20 mL/min
<b>RANGE STUDIED:</b> 1.25 to 6.99 mg/m <sup>3</sup> [1]			air, 150 mL/min
BIAS:	(100-L sample) - 1.37%	CALIBRATION:	standard solutions of triphenyl phosphate in anhydrous ether

APPLICABILITY: The working range is 0.3 to 20 mg/m<sup>3</sup> for a 100-L air sample. This method may be adapted to other phosphates of relatively low volatility with appropriate changes in chromatographic conditions.[1] A non-polar capillary column may be used for better resolution and sensitivity.

RANGE:

INTERFERENCES: None identified.

OVERALL PRECISION (Ŝ,T):

ACCURACY:

OTHER METHODS: This method revises S210 [1].

0.066 [1]

± 11.24

#### **REAGENTS:**

- 1. Diethyl ether, anhydrous, reagent grade.
- 2. Triphenyl phosphate,\* reagent grade.
- 3. Hydrogen, purified.
- 4. Compressed air, prefiltered.
- 5. Nitrogen, purified.
- 6. Calibration stock solution (10-600 μg triphenyl phosphate per 10 mL diethyl ether).
  - \* See Special Precautions

## **EQUIPMENT:**

- Sampler: 37-mm cellulose ester membrane filter (0.8-µm pore size) with cellulose backup pad held in a three-piece cassette filter holder supported by a cellulose backup pad.
- 2. Personal sampling pump @ 1 to 3 L/min, with flexible tubing.
- Gas chromatograph equipped with a flame photometric detector, phosphorus filter, and column (p. 5038-1).
- 4. Electronic integrator or other suitable method for measuring peak areas.
- 5. Ointment jars, 2 oz., squat form with aluminum-lined screw caps.
- 6. Syringes, 10-µL and other convenient sizes for preparing standard solutions.
- Pipets, 10-mL and other convenient sizes for preparing standard solutions.

**SPECIAL PRECAUTIONS:** Repeated exposure to triphenyl phosphate through inhalation or ingestion may cause minor changes in blood enzymes. Triphenyl phosphate also causes neurotoxic effects in animals; therefore, persons with pre-existing neuromuscular disorders may be at increased risk.[2] Handle only in a fume hood. Avoid skin contact.

## SAMPLING:

- 1. Calibrate each personal sampling pump with a representative filter cassette in line.
- Remove the cassette plugs and attach to the personal sampling pump with flexible tubing.
- 3. Sample 10 to 400 L or more of air at an accurately known flow rate of 1 to 3 L/min.
- 4. Seal the collected sample cassette firmly with plugs. Pack securely for shipment.

## **SAMPLE PREPARATION:**

- 5. Transfer cellulose membrane filter and cellulose backup pad with tweezers to an ointment jar.
- 6. Pipet 10.0 mL of ether into each jar. Seal the jar immediately to minimize evaporation.
- 7. Allow samples to stand for at least 30 minutes with occasional agitation.

## **CALIBRATION AND QUALITY CONTROL:**

- 8. Calibrate daily with at least six working standards over the range 10 to 900 µg TPP per sample.
  - a. Add know amounts of calibration stock solution to cover the range of interest to 10.0-mL volumetric flasks and dilute to the mark with diethyl ether.
  - b. Analyze working standards together with samples and blanks (steps 11 and 12).
  - c. Prepare a calibration graph of peak area vs. µg of triphenyl phosphate per 10-mL sample.
- 9. Determine recovery for each lot of filters used for sampling in the concentration range of interest. Prepare three filters at each of five levels plus three media blanks.
  - a. Spike aliquot of calibration solution onto each filter.
  - b. After air-drying, extract filters in 10 mL diethyl ether (steps 5 through 7).
  - c. Analyze together with working standards.

- d. Prepare graph of recovery vs. µg triphenyl phosphate per sample.
- 10. Analyze three quality control blind spikes and three analyst spikes to ensure that the calibration and recovery graphs are in control.

#### **MEASUREMENT:**

- 11. Set gas chromatograph according to manufacturer's recommendations and to conditions given on page 5038-1. Inject 5-µL sample aliquot using solvent flush technique or with autosampler. NOTE: If peak area is above the linear range of the calibration graph, dilute, reanalyze, and apply appropriate dilution factor in the calibration.
- 12. Measure peak area.

#### CALCULATIONS:

- 13. Determine mass, µg (corrected for recovery), of triphenyl phosphate found in the sample (W) and in the average media blank (B).
- 14. Calculate concentration (C) of triphenyl phosphate in the volume of air sampled, V (L):

$$C = \frac{W - B}{V}$$
, mg/m<sup>3</sup>.

#### **EVALUATION OF METHOD:**

This method was evaluated over the range of 1.25 to 6.99 mg/m  $^{3}$  at an atmospheric temperature and pressure of 24  $^{\circ}$ C and 759 mm Hg, using a 100-L sample. Overall sampling and measurement precision,  $\hat{S}_{rT}$ , was 0.066, with average recovery of 99.1%, representing a non-significant bias. Recovery of triphenyl phosphate from filters was 99.3% for an air sample concentration of 7.0 mg/m  $^{3}$  at 1.5 L/min for 66 minutes. [1,3]. A storage stability study was not conducted.
